

IC Card (student/employee ID) Linking Solutions

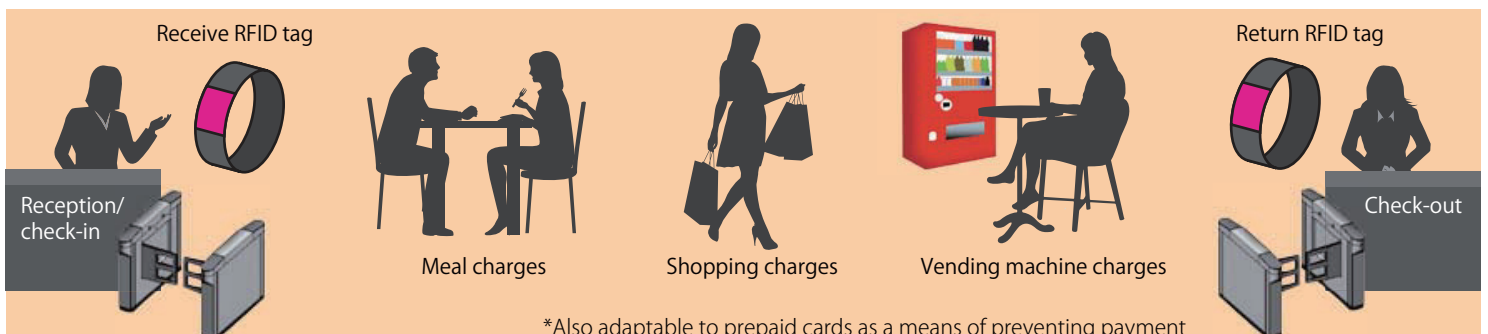

Toshiba Plant Systems & Services offers total RFID support for the operation of electronic student/employee ID cards. Functions such as transaction logs and auto links to valid card information eliminate the tasks for tedious card management.

- Host system link: Automatically retrieves information required to issue IC cards from a host system
- Automatic card data processing: Automatically generate information on the IC cards issued
- Card issuing machine link: Links a card issuing machine to the issuance information and issuance results
- Contractor issuance: Generates information on the cards issued by a contractor and registers card issuance results
- Subsystem links: Links to valid IC card services and applications in subsystems (IC cards can be used almost immediately after issuance.)

Billing Management (deferred payment) Solutions

On-site cashless charge payment: Bills are settled when purchasers exit an area.

*Also adaptable to prepaid cards as a means of preventing payment
