Toshiba Plant Systems & Services Corporation

Contract for Gas Turbine Cogeneration System Construction Project in Taiwan

Toshiba Plant Systems & Services Corporation (“TPSC”) announced today that TPSC awarded a contract for a gas turbine cogeneration system construction project in Taiwan on October 28, 2020.

The gas turbine cogeneration system will be built by CHIMEI Corporation at its factory in Tainan City, one of the six largest cities under direct control in Taiwan.

CHIMEI Corporation, established in 1960, is a Taiwan-based performance materials company. It has long been known as the world’s largest vendor of ABS resins, which are widely used in electronics, home appliances and other products.

In keeping with its Clean & Green vision, CHIMEI is committed in finding innovative ways to reduce the emissions. By investing in the new Gas Turbine Cogeneration System, the company hopes to reduce the emissions to a radically low level.

TPSC awarded the contract due to the high evaluation of the quality of its products in terms of reliability and performance in line with Japanese standards, as well as its track record and technical capabilities in supplying numerous gas turbine combined cycle power plants, mainly in Southeast Asia, but also in Africa and other regions. This is the first project for which TPSC is the main contractor in the country.

TPSC will provide engineering and power generation related equipment, and in cooperation with Toshiba Electronic Components Taiwan Corporation, will perform civil engineering, construction, installation, testing and commissioning, with the target of completing the project in November 2022.

TPSC will continue to expand our global business through aggressive marketing activities based on our technical capabilities and reliability behind by a proven track record in domestic and overseas market.

* EPC : Full turnkey scope including Engineering, Procurement, Construction and Commissioning
